Printed on recycled paper
This manual was developed by the New England Interstate Water Pollution Control Commission (NEIWPCC). NEIWPCC is a not-for-profit interstate agency, established by an Act of Congress in 1947, which serves its member states (Connecticut, Maine, Massachusetts, New Hampshire, New York, Rhode Island, and Vermont) by providing coordination, public education, research, training, and leadership in water management and protection.

This manual was made possible by a grant from the U.S. Environmental Protection Agency (EPA). Charles Vanderlyn served as the EPA Project Officer for EPA Grant No. CP83052701. The contents do not necessarily reflect the views and policies of EPA or NEIWPCC’s member states, nor does the mention of trade names or commercial products or processes constitute endorsement or recommendation for use.

This manual was compiled and written under the direction of an advisory committee consisting of representatives of NEIWPCC member state environmental agencies, EPA, and wastewater consultants.

Advisory Committee:

- William Hogan, CT DEP
- Don Albert, ME DEP
- Steven Lipman, MA DEP
- George Neill, NH DES
- Brandon Chew, NYS DEC
- Bill Patenaude, RI DEM
- Jim Courchaine, Brown and Caldwell
- Charles Vanderlyn, EPA

NEIWPCC would like to thank the following people who contributed their time in reviewing this manual.

- Nelson Thibault, Hoyle, Tanner & Associates
- Jo-Ann Pratt, Hoyle, Tanner & Associates
- David Popielarczyk, Tighe & Bond
- Paul Olander, VT DEC
- Margo Webber, MA DEP
- Joe Boccadoro, EarthTech
- Erica Cruden, NYS DEC
- Don Kennedy, NEIWPCC
- Shawn Dent, Corollo Engineering

Michael Jennings

**Design and Production**
Ricki Pappo, Enosis – The Environmental Outreach Group

**Editorial Support**
Stephen Hochbrunn
This guidance document is designed to be used by collection system owners, managers, and operators seeking to optimize the operation, maintenance, and rehabilitation of their systems. This document highlights areas of day-to-day operation and maintenance and long-term system planning that can be implemented, improved upon, or documented in order to optimize system performance, enhance program effectiveness, and reduce overall long-term costs.

A literature review was conducted to obtain current information on collection system operation, maintenance, and rehabilitation trends. Wherever practical, information was taken directly from the literature compiled under the review. Reference information is provided where appropriate to allow users of this guidance document to obtain the source documentation in order to find additional and more detailed information.

This reference was written to provide guidance to towns and organizations dealing with wastewater collection activities. It is not meant to be a substitute for professional advice in situations where it is warranted. If the information we provide does not specifically and sufficiently address your problem or concern, you are urged to consult with industry professionals, service representatives or regulatory officials.

If you find any mistakes or omissions, please notify NEIWPCC by using the feedback form provided at the end of this document.

ACKNOWLEDGEMENTS ........................................................................................................... ii
FOREWORD ................................................................................................................................ iii
CONTENTS .................................................................................................................................... v

## CHAPTER 1: INTRODUCTION

1.1 Background .......................................................................................................................... 1-1
1.2 Brief History of Collection System Regulatory Activities .................................................... 1-2
1.3 Brief Discussion of Types of Maintenance Activities ............................................................ 1-3
  1.3.1 Corrective Maintenance .................................................................................................... 1-4
  1.3.2 Preventive Maintenance .................................................................................................... 1-5
  1.3.3 Predictive Maintenance .................................................................................................... 1-5
1.4 Role of the Collection System Owner/Operator/Manager ....................................................... 1-7

*Chapter 1 References* .................................................................................................................. 1-7

## CHAPTER 2: CMOM

2.1 Current Regulations for Collection System Operation and Maintenance ............................... 2-1
2.2 CMOM Concept and What It Might Entail ............................................................................ 2-2
  2.2.1 General Performance Standards ...................................................................................... 2-2
  2.2.2 CMOM Program Components ......................................................................................... 2-3
  2.2.3 Measures and Activities ................................................................................................ 2-4
2.3 More Information .................................................................................................................. 2-7

*Chapter 2 References* .................................................................................................................. 2-7

## CHAPTER 3: OPTIMIZING ADMINISTRATIVE AND MANAGERIAL FUNCTIONS

3.1 Standards, Policies, and Procedures ....................................................................................... 3-1
3.2 Staffing, Training, and Certification ....................................................................................... 3-2
3.3 Budgets .................................................................................................................................. 3-4
3.4 Asset Management ................................................................................................................ 3-4
  3.4.1 Components of an Asset Management System ............................................................... 3-6
3.5 Safety ..................................................................................................................................... 3-10
3.6 Security .................................................................................................................................. 3-12
  3.6.1 Securing Information ........................................................................................................ 3-12
  3.6.2 Securing Facilities ............................................................................................................. 3-12
  3.6.3 Employees ........................................................................................................................ 3-13
3.7 Emergency Response Plans .................................................................................................... 3-14
3.8 Implementation and Effectiveness Analysis ............................................................................ 3-16
3.9 More Information .................................................................................................................. 3-17

*Chapter 3 References* .................................................................................................................. 3-17
CHAPTER 4: OPTIMIZING LEGAL AUTHORITY

4.1 Sewer Use Ordinances ................................................................. 4-1
   4.1.1 Suggested Language ......................................................... 4-2
   4.1.2 Design Standards ........................................................... 4-4
4.2 Fats, Oil, and Grease Control ................................................ 4-5
4.3 Private/Satellite Systems ....................................................... 4-5
4.4 Private Inflow Control ........................................................... 4-6
4.5 More Information ................................................................. 4-8

Chapter 4 References ................................................................. 4-9

CHAPTER 5: EFFECTIVE COMMUNICATION

5.1 Working with the Public .......................................................... 5-1
   5.1.1 Outreach ................................................................. 5-1
   5.1.2 Signage ................................................................. 5-2
   5.1.3 Alternative Dispute Resolution ..................................... 5-3
5.2 Working with Local Government ........................................... 5-4
   5.2.1 Effective Project Presentation .................................... 5-4
5.3 Communicating in a Crisis ...................................................... 5-6
   5.3.1 Communication Planning and Preparation ...................... 5-7
5.4 More Information ................................................................. 5-8

Chapter 5 References ................................................................. 5-8

CHAPTER 6: UTILIZING TECHNOLOGY EFFECTIVELY

6.1 Benchmarking ........................................................................ 6-1
   6.1.1 Performance Indicators ................................................. 6-2
6.2 Management Information System .......................................... 6-2
6.3 Maps and GIS ....................................................................... 6-3
6.4 Flow Monitoring ................................................................. 6-4
6.5 Modeling ............................................................................... 6-4
6.6 More Information ................................................................. 6-5

Chapter 6 References ................................................................. 6-5

CHAPTER 7: OPERATION, MAINTENANCE, AND REHABILITATION TECHNIQUES

7.1 Methods and Equipment ........................................................ 7-1
   7.1.1 Gravity Collection Systems ........................................ 7-1
   7.1.2 Pump Stations and Force Mains .................................. 7-8
   7.1.3 Siphons ..................................................................... 7-11
   7.1.4 Alternative Collection Systems .................................. 7-11
   7.1.5 Spare Parts and Equipment ........................................ 7-13
7.2 Rehabilitation Options .......................................................... 7-14
  7.2.1 Choosing the Best Option ................................................... 7-14
  7.2.2 Cost Considerations ......................................................... 7-15
7.3 Hydrogen Sulfide Issues ....................................................... 7-16
7.4 Pumps, Motors, and Efficiency ............................................... 7-17
7.5 More Information ............................................................... 7-18

Chapter 7 References .............................................................. 7-18

CHAPTER 8: NOTIFICATION AND REPORTING PROCEDURES

8.1 Reporting Overflows to State and EPA .................................... 8-1
  8.1.1 Initial Notification ....................................................... 8-1
  8.1.2 Written Report .......................................................... 8-2
8.2 Immediate Notification .......................................................... 8-2
  8.2.1 Immediate Public Notification ........................................ 8-3
  8.2.2 Immediate Notification of Other Agencies .......................... 8-3
8.3 More Information ............................................................... 8-4

Chapter 8 References .............................................................. 8-6

APPENDICES

Glossary .......................................................... A-1
Day-to-Day Standard Operating Procedures ............................. B-1
Emergency Procedures ....................................................... C-1
House Lateral Design Standards ........................................... D-1
EPA Region 4 MOM Checklist ................................................ E-1
Inspection Forms .............................................................. F-1
